

It's my pleasure to offer my recommendations on behalf of Mr. Hussain Hamad Murajea whom I had known for two years. As a student, Mr. Hussain is a hard-working, dedicated, creative and has actively set himself up for a very promising profession in his field. I was Mr. Hussain's college professor for my course of "electric circuits" in which he achieved a high score and showed an exceptional performance in the course project in which he also demonstrated good leadership skills throughout the cooperation with his teammates. Mr. Hussain also registered in my class of Engineering Seminar in which students learn how to perform scientific research tasks, prepare scientific reports and present them in front of students audience; Mr. Hussain through this course showed an excellent performance in such tasks, moreover during the discussions and the submitted report I can praise his command of spoken and written English.

Moreover, Mr. Hussain Currently in his 4th year as an electrical engineering student at Omar Al-Mukhtar University, and without telling me, at the beginning of his first semester I knew he has an interest in physics. Mr. Hussain is a very active student during classes, and he has a remarkable curiosity, his questions during my lectures were somehow related to physics. He told me afterward that he is passionate about physics and astronomy and he hoped to major in physics in the first place, unfortunately for him physics departments generally in Libya lack adequacy for some levels and therefore he went to engineering which is more competent and also have some common subjects relevant to physics.

As far as I'm concerned Mr. Hussain loves voluntary work, and he has participated in many voluntary actions in the university, he also told me about his work with some science websites and communities that he has contributed to fulfill and strengthen his interests about physics and science generally. What was most fascinating to me about his work and made me write this letter wholeheartedly is a book that he has written about gravity, simplifying the concepts of Relativity and Newton's laws which really impressed me. He also invited me to a lecture he presented with some science community about physics and astronomy that really wowed me and the audience.

Based on my overall knowledge of Mr. Hussain, and based on my strong belief that your program will help him to achieve his academic and professional endeavors; I do truly recommend him for admission to your summer program.

Sincerely,

Dr. Mahmoud Elgafy  
Professor of Electrical Engineering, Omar Al-Mukhtar University  
Al-Bayda, Libya.
